■ NOAA ATLAS SERIES

The World Ocean Database 2001: The oceanographic databases described by this atlas series greatly expands on the *World Ocean Database 1998* (WOD98) product. We have expanded these earlier databases to include data from new instrument types such as profiling floats and new variables such as pCO₂ and tCO₂.

The World Ocean Atlas 2001: Oceanographic analyses described by this atlas series expand on earlier works, i.e. the *World Ocean Atlas 1998* (WOA98), *World Ocean Atlas 1994* (WOA94) and *Climatological Atlas of the World Ocean*. Previously published oceanographic objective analyses have proven to be of great utility to the oceanographic, climate research, and operational environmental forecasting communities. Such analyses are used as boundary and/or initial conditions in numerical ocean circulation models and atmosphere-ocean models, for verification of numerical simulations of the ocean, as a form of "sea truth" for satellite measurements such as altimetric observations of sea surface height, for computation of nutrient fluxes by Ekman transport, and for planning oceanographic expeditions.

The **World Ocean Database 1998** publications series display the spatial and temporal distribution of the data in the WOD98 data set. The WOD98 represented the first part of an extension of earlier work, the World Ocean Atlas 1994 (WOA94). WOD98 expands on WOA94 by including the additional variables nitrite, pH, alkalinity, chlorophyll, and plankton, as well as all available metadata and meteorology. The second part of this extension is the World Ocean Atlas 1998 (WOA98) which presents objectively analyzed fields of many of the variables in WOD98 (see next section). Each WOD98 publication is dedicated to a single parameter in the data set.

The **World Ocean Atlas 1998** publication series presents global, objectively analyzed fields of major ocean parameters on a one-degree latitude-longitude grid for selected standard depth levels from the sea surface to 5500 m depth. Produced by the NODC Ocean Climate Laboratory, the atlases present analyses of temperature, salinity, oxygen, phosphate, nitrate, and silicate data. This 1998 release expands on the previous 1994 atlas set by including the additional variables nitrite, pH, alkalinity, chlorophyll, and plankton, as well as all available metadata and meteorology. The data analysis and quality control procedures are described in Internal Report 14. These analyses are also available on a set of 3 CD-ROMs.

The World Ocean Atlas 1998 were produced from the NODC's data holdings as of the first quarter of 1994, as well as some of the data submitted to NODC since 1994. In addition, data gathered as a result of the IOC/IODE GODAR project, the Global Ocean Database project and Global Temperature Salinity Profile Project (GTSP) project, were included in this study.

The Atlas of Surface Marine Data 1994 (ASMD94) is an atlas series depicting the seasonal and yearly variations of the surface marine atmosphere over the global oceans. Quantities include directly observed parameters (e.g., sea surface temperature, air temperature, sea level pressure, humidity, cloudiness, winds), a full set of heat and momentum fluxes (short and long wave radiation, latent and sensible heat flux, wind stress), fresh water fluxes (evaporation, precipitation, buoyancy flux), and a variety of derived quantities (e.g., air density, virtual temperature, stability parameter). All quantities shown in the atlas series are derived from individual ship, buoy, and other marine observations found in the Comprehensive Ocean Atmosphere Data Set (COADS) Release 1 (and an interim release). The seasonal plots depicted in the atlas were computed from monthly mean data. Monthly mean climatologies covering 1945-1989 and monthly mean anomalies were computed on a 1-degree latitude by 1-degree longitude grid and objectively analyzed. The grid and objective analysis are basically identical to that used in the World Ocean Atlas 1994.
